

COMPLIANCE

SOVEREIGN DATA

GOVERNMENT

Regulated Telecom Billing

Complex tax engine integration and sovereign data compliance for high-security government contractors.

THE CHALLENGE

A telecom serving government contractors faced multi-jurisdiction tax complexity alongside strict data-residency mandates. Every transaction required an immutable, auditable record, and processing could never leave the sovereign boundary of the jurisdiction it belonged to.

THE ZOIKONEX APPROACH

- Jurisdiction Engine automating per-region tax computation and regulatory rules
- Sovereign data residency with in-region processing and storage
- Evidence Ledger recording immutable, traceable billing and audit trails
- Policy-driven governance controls applied as the operating model, not an add-on
- Controls aligned to SOC 2 Type II, ISO 27001, GDPR and PCI DSS L1
